

Accelerate access to your critical therapies

Help eligible patients access their prescribed treatments with **AP Connect**[®], a technology-driven solution that digitally integrates patient support programs with **AssistPoint**[®], Annexus Health's patient access management platform for healthcare provider organizations.

AP Connect helps life science companies and charitable foundations overcome common barriers to patient support program enrollment, re-enrollment, and fulfillment, including:

- Low patient/provider awareness of award balance, potentially leading to treatment nonadherence and prescription abandonment
- Time-consuming manual enrollment processes that can result in treatment delays, interruptions, and discontinuation, negatively impacting health outcomes
- Lack of interconnectivity between patient support programs and the internal systems used by healthcare organizations, causing redundant data entry and creating opportunities for human error and omissions, which can delay the start of therapy

Connectivity that makes a difference

AP Connect creates a two-way, secure information exchange between patient support programs and **AssistPoint**, accelerating the application, enrollment, and fulfillment processes. All integrated programs use a standardized digital enrollment form within **AssistPoint**, which is automatically prepopulated with demographic information from the practice management system, eliminating the

need for patients to fill out multiple repetitive forms. E-signature capability is included within the digital enrollment process when a patient and/or healthcare provider signature is required. Furthermore, with digital integration, program communication delays are reduced, award approval notifications are sped up, and healthcare providers can easily provide patients with accurate, up-to-date award balances.

Optimize affordability

Accelerating the patient support program enrollment process with **AP Connect** helps ensure patients can afford their intended therapy.

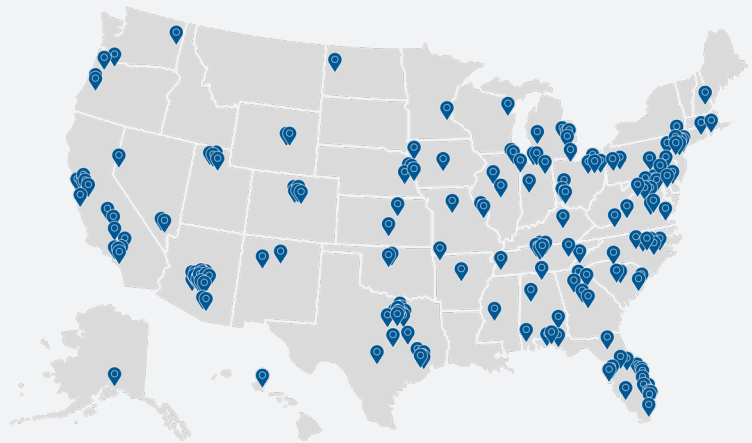

Improve patient outcomes

Making it easier for eligible patients to be enrolled in patient support programs helps improve access to therapy, time to start on therapy, and duration of therapy, while reducing financial toxicity.

Our provider network

AssistPoint is licensed by 180+ healthcare organizations across 4,500+ sites of care within community, institution, hospital, infusion center, and specialty Rx settings and representing multiple disease states

📍 Primary address for each of our contracted healthcare organization customers

Our patient impact

\$7 BILLION+ in awards secured with **AssistPoint** since 2018

Why patients and their families want you to consider AP Connect

When a patient support program is digitally integrated with **AssistPoint** via **AP Connect**, administrative staff at the provider's office can quickly and easily enroll eligible patients using the digital enrollment feature within **AssistPoint**. A majority of the fields of the standardized digital enrollment form are prepopulated with information that flows directly from the practice management system to accelerate and simplify the enrollment process, which minimizes errors and saves valuable time.

"With the digital integration feature in AssistPoint, I submitted an application for patient financial assistance and got an answer the same day!"

—Sandy, Patient Advocate

"The digital enrollment feature in AssistPoint is a game changer in the daily role of a financial counselor."

—Kerri, Financial Counselor

"Digital integration alone saves us about 30 minutes per enrollment. It really adds up."

—Beth, Revenue Cycle Manager
